Scientist who glimpsed god

Interview

Clive Cookson meets Paul Davies, physicist with a spiritual view

Paul Davies, inspired by the 'awe-inspiring beauty, harmony and logic of nature'

The title of his latest book, "The Mind of God", and the subtitle of this one, "The Book of God", suggest that Davies is a man of faith. But he is also a physicist, and his work has been described as "a bridge between science and religion".

Davies is the author of many books on the relationship between science and spirituality, and his work has been influential in popularizing the concept of "the multiverse" - the idea that our universe is just one of many, possibly infinite, universes that exist in parallel.

In his recent book, "The Book of God", Davies explores the possibility of a "God" existing beyond our current understanding of physics. He argues that the universe is "too complex" and "too big" to have come about by chance, and that it must have been designed by a higher intelligence.

Davies believes that science and religion can coexist, and that they can work together to help us understand the world and our place in it. He is a strong advocate of open-mindedness and scientific inquiry, and he encourages people to question the status quo and explore new ideas.

In this interview, Davies talks about his work and his views on the relationship between science and religion. He also discusses the importance of education and the role of science in society.

Of course science cannot prove the existence of a design, or a designer, but it can reveal the inner depth of ingenuity that goes into making up this marvelous universe, our home.

The awe-inspiring beauty of our universe suggests the existence of an intelligent creator.
